Education

BS - Computer Science – Portland State University
GPA: **3.5** September 2021 - June 2025

SKILLS

Cloud & DevOps: AWS, GCP, Docker, YAML, CI/CD, Terraform

Programming: Python, C, C++, SQL, Rust, R

Web & Front-End: React, Tailwind, JavaScript, Flask, Django

Collaboration: Agile, Jira, Confluence

Work Experience

Ascentec Engineering | *Quality Inspector 2*
June 2025 - Present

La Provence Boulangerie & Pâtisserie | *Waiter / Bartender*
April 2019 - June 2025

Relevant Experience

Database Design & SQL (PostgreSQL / Django):
Led the design and implementation of a normalized PostgreSQL database schema for a production inventory system, developing SQL queries to support a Django frontend while ensuring data integrity, maintainability, and documentation.

Operational Analytics & Excel Reporting:
Built an automated Excel-based analytics tool to calculate and track manufacturing First Pass Yield (FPY%) by part number and technician; the reporting system is now used to monitor departmental performance and inform upper management decisions.

Data Analysis & Visualization (Python & R):
Applied statistical analysis to explore datasets and create visualizations that highlight trends, comparisons, and key insights.

PROJECTS

Check-in & POS Server | PSU Capstone Project
January 2025 - June 2025 | CS470

Python / SQL / Git / Jira / Confluence

- Built a full stack POS application from the ground up, integrating into a sponsor's existing system
- Led database design & development while ensuring sensitive PII data was secure using logical replication
- Collaborated frequently with stakeholders to refine requirements and evolve system architecture
- Communicated effectively with teammates to incrementally develop and test features through weekly sprints

Ferrofluid Music Visualizer
December 2024 | CS416p / Personal

MicroPython / Python

- Applied Agile methods to develop and test a circuit for real-time audio visualization using an electromagnet controlled through a Raspberry Pi Pico W
- Modularized components (circuit, web server, visualizer) with independent life cycles
- Built a local Python web server to stream audio data, replacing microphone input to meet time constraints

Cloud Based AI Web Application
December 2024 | CS430

Python / GCP SDK / Docker / HTML / CSS

- Built and deployed a containerized flask web app to the Google Cloud using Cloud Run
- Implemented datastore persistence and automated deployment with Docker.
- Utilized REST API calls to Open AI & Spotify to generate recommendations based on user specific data
