

Education

BS - Computer Science — Portland State University
GPA: **3.5** September 2021 - June 2025

SKILLS

Cloud & DevOps: AWS, GCP, Docker, YAML, CI/CD, Terraform

Programming: Python, C, C++, SQL, Rust, R

Web & Front-End: React, Tailwind, JavaScript, Flask, Django

Collaboration: Agile, Jira, Confluence

Work Experience

Ascentec Engineering | *Quality Inspector 2*
June 2025 - Present

La Provence Boulangerie & Pâtisserie | *Waiter / Bartender*
April 2019 - June 2025

Relevant Experience

Cloud Application Development: Built and deployed secure containerized apps on GCP using Docker, Cloud Run, and Datastore; familiar with AWS services.

Data Systems & Pipelines: Designed relational schemas and integrated SQL/PostgreSQL databases for real world systems with Python applications; experience with Django ORM and logical replication.

Front-End & Visualization: Developed responsive websites and interactive interfaces with React & Flask.

System Integration: Combined APIs (Spotify, OpenAI) into end-to-end applications, translating requirements into technical implementations.

Agile Collaboration: Delivered projects through sprint cycles using Jira and Confluence across small teams. Frequently aligned with stakeholders to ensure requirements were satisfied.

PROJECTS

Check-in & POS Server | PSU Capstone Project

January 2025 - June 2025 | CS470

Python / SQL / Git / Jira / Confluence —————

- Built a full stack POS application from the ground up, integrating into a sponsor's existing system
- Led database design & development while ensuring sensitive PII data was secure using logical replication
- Collaborated frequently with stakeholders to refine requirements and evolve system architecture
- Communicated effectively with teammates to incrementally develop and test features through weekly sprints

Ferrofluid Music Visualizer

December 2024 | CS416p / Personal

MicroPython / Python —————

- Applied Agile methods to develop and test a circuit for real-time audio visualization using an electromagnet controlled through a Raspberry Pi Pico W
- Modularized components (circuit, web server, visualizer) with independent life cycles
- Built a local Python web server to stream audio data, replacing microphone input to meet time constraints

Cloud Based AI Web Application

December 2024 | CS430

Python / GCP SDK / Docker / HTML / CSS —————

- Built and deployed a containerized flask web app to the Google Cloud using Cloud Run
- Implemented datastore persistence and automated deployment with Docker.
- Utilized REST API calls to Open AI & Spotify to generate recommendations based on user specific data
